

XP Ultra™ Premium Blade Blade Selection

Blades available in purple, green, orange, and yellow.

Blade Selection Guide for Sawing Green Concrete

Note: When selecting the correct blade specification the EE-1 is the fastest cutting for any aggregate. As you go up the scale to EE-6 and EE-8 the blade speed will decrease but the life of the blade will increase dramatically. For example, the EE-6 specification would be recommended for cutting soft aggregates such as limestone with the lowest unit blade cost. If you want to avoid blade changing, use either EE-2 or EE-6, these specification will cut practically any aggregate. Also remember as diamond blade bond hardness increases, (from EE-1 to EE-8), sharper sand is required to avoid significant loss of cutting speed.

Blade Diameter	Blade Thickness	Arbor
10"	.100"	Gem Diamond
12"	.120"	Gem Diamond
13.5"	.120"	Gem Diamond
14"	.120"	Gem Diamond
